

FlashPoints For AutoCAD And BricsCAD

FlashPoints for AutoCAD and BricsCAD is a simple but efficient piece of software designed to help you create and manage topographic point groups in both AutoCAD and BricsCAD. FlashPoints allows you to: Create, import, edit, and save point groups in both AutoCAD and BricsCAD Establish a relationship between entities from an imported file and the point groups that are added to an open AutoCAD project Change the elevation and orientation parameters of an existing point group Filter point groups with respect to attributes such as elevation and orientation Automatically assign a sequential number to the groups Implement a "Flashpoint detection" mechanism (with a high sensitivity threshold) that enables you to rapidly generate point group sequences based on common attribute patterns Based on the user reviews: FlashPoints is a simple yet efficient piece of software that allows you to quickly create and manage point groups in AutoCAD and BricsCAD. To that extent, you can create, import, edit, and save point groups in both AutoCAD and BricsCAD. FlashPoints makes it simple to: Create, import, edit, and save point groups in both AutoCAD and BricsCAD Establish a relationship between entities from an imported file and the point groups that are added to an open AutoCAD project Change the elevation and orientation parameters of an existing point group Filter point groups with respect to attributes such as elevation and orientation Automatically assign a sequential number to the groups Implement a "Flashpoint detection" mechanism (with a high sensitivity threshold) that enables you to rapidly generate point group sequences based on common attribute patterns Benefits: Import and manage point groups in both AutoCAD and BricsCAD Change the elevation and orientation parameters of point groups Filter point groups with respect to elevation and orientation Automatically assign a sequential number to the groups Detect points within an imported file and assign them to the point groups that are present in the AutoCAD or BricsCAD project Using the associated Help file, it should be simple to understand how to use FlashPoints and grasp its fundamental aspects. The less known technical aspects: I am also one of the programmers who worked on it For as long as I can remember, I was surprised that no one ever took the time to develop software to assist CAD users in managing point groups. That situation changed years ago, when I came across the idea of developing a

What's New In FlashPoints For AutoCAD And BricsCAD?

Introducing FlashPoints is a rapid utility that allows you to load or create point groups in AutoCAD. With this utility, you can quickly assemble a set of points by grouping points on or near the same, and at the same elevation. You can save the desired point set to AutoCAD or BricsCAD native formats or to a.CSV (comma separated) file for importation. The FlashPoints utility is easy to use and does not require any training. You can use the utility with AutoCAD, AutoCAD LT, and BricsCAD (XW4). Please note that the utility only works on.dwg files or DXF files. To use the utility: * Select an existing.dwg file or open a new one, * Drag and drop points. * Press F5 to generate point groups, * Press F6 to generate sequential point groups and subsets, * Press F7 to generate ordered point groups, * Press F8 to generate parabolic point groups, * Press F9 to generate ring point groups. If you want to create a number sequence of point groups, just press F4. Press F5 or F6 to generate a number sequence of points, or F3 or F4 to generate sequential points or parabolic points. Press F1 for help. Please contact your system administrator to download and install the utility. Thanks. (you may use F2 to open a save file. (it is also valid for AutoCAD 2000. Some images may look degraded or distorted due to heavy metal interference. We recommend that users not purchase these addons as they might be void of important features or bugs. Upgrading to a 'free' non-modified version of FlashPoints could resolve some of the reported bugs in the purchased version. If you have any questions or problems, please don't hesitate to contact our technical support Features · Load or create point groups in AutoCAD · Save point sets in native AutoCAD (.dwg), AutoCAD LT (.dwg) or AutoCAD WS (.dwg) formats or to a.CSV (comma separated) file for importation into AutoCAD and AutoCAD LT. · Create sequences of point groups. · Create and edit point groups: o Select the grouping and attribute properties,

System Requirements:

CPU: Pentium 4 (minimum of 1.4GHz) Memory: 1GB (RAM) or more Hard Drive: 15GB (free space) (latest patch) Current version: Version 2.8.6.3 Compatibility: Please read the list of software that you have installed (wine or programs that use Windows API) before installing this version of the game. Updates: 10-26-09 2.8.6.2 Minimum System Requirements: CPU: Pent
